Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

1. **Identify the main idea or thesis of the passage.**
 2. **Summarize the supporting points or evidence.**
 3. **Explain the author's purpose or tone.**
 4. **Discuss the significance or implications of the passage.**
 5. **Provide a concluding statement or reflection.**

Figure 6 | The effect of the number of iterations on the accuracy of the proposed algorithm. The figure shows two bar charts comparing the accuracy of the proposed algorithm against the number of iterations (10, 20, 30, 40, 50) for two different datasets: "Dataset A" and "Dataset B". The y-axis represents Accuracy (%) from 80 to 95. In both cases, accuracy increases with more iterations, peaking at 30-40 iterations before slightly declining or stabilizing.

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain.
